MADE TO RISE

Head-to-Toe High-Performance

It's a tennis ball in full flight, a racket reaching high for a put-away smash, or a ball toss ascending crisply toward the sky. In tennis, things rise. And an athlete's equipment should be no exception. The Wilson tennis collection is made to rise with every swing through the total package of high-performance rackets, balls, sportswear, shoes and more. The true number one brand in tennis.

ARTISTRY, PERFECTED.
Experience the next chapter of greatness with the RF Collection,* including the all-new RF 01, designed to inspire the next generation of creative tennis.

RACKETS

RF 01
SABR Frame Design: Created in collaboration with RF for excellent performance versatility, allowing for pace, spin, and direction changes, which are a signature of his all-around style.

Rackets | PERFORMANCE

INNOVATIONS

Optimizes three-dimensional frame bending for targeted power, spin, and control.

WILabs innovation team's patent pending technology that utilizes computer aided design software to create specific geometry that maximizes vertical bending without losing any torsional stability.

Patent-protected lay-up produces a more connected-to-the-ball feel while better complementing the modern, vertical swing path. Material increases both flexibility and stability without compromise through the swing.

Carbon fiber handle extends to connect directly to end cap for improved feel and enhanced torsional stability.

Easy-to-replace bumpers & grommets prolong your racket's lifespan.

Created in collaboration with RF for excellent performance versatility, allowing for pace, spin, and direction changes, which are a signature of his all around style. (Its an all-encompassing tech for the geometry of the racket)

Racket is filled internally with foam to optimize vibration dampening.

This update to the classic Pro Staff Graphite and Kevlar braid arranges the braid fibers at 45 degree angles, allowing the braid to "breathe" more upon impact. The result is an enhanced pocketing feel combined with incredible stability.

Encompasses three geometrical enhancements designed to boost stability and generate easy power off the strings.

Cavity on the inside of the frame extends the cross strings for more power and responsiveness off the string bed.

Patented Spin Effect Technology is the first racket system that actually increases ball RPM without players changing their swing. The net seems lower and the court feels longer on all your shots.

Braided Graphite Basalt is an elastic and reactive material combination that improves the flex of a racket. This evolution of Wilson's BLX® technology increases the ball's contact with the strings to provide enhanced feel and greater control.

Developed for aggressive swings, this premium modulus carbon graphite provides increased frame stiffness for explosive power.

Three-piece Racket system where hoop and handle are separated with Iso-Zorb, providing the ultimate in comfort and soft feel.

Provides a consistent, more forgiving string bed response while dramatically increasing the sweet spot.

Spin Effect® Technology is a racket and string pattern innovation that increases ball spin. Pros often customize the racket they use. Racket specifications on endorsed consumer models may vary from the models used by Pros for match-play.

What does your game need?

POWER

SPIN

CONTROL

CLASH

COMFORTABLE

For players seeking easy power and comfortable impact.

ULTRA

EXPLOSIVE

For players seeking power to penetrate the court.

SHIFT

SPIN

For players seeking to generate significant spin and depth.

BLADE

FEEL

For players seeking ultimate control and responsive impact from the baseline.

PRO STAFF

PRECISION

For players seeking pinpoint accuracy and classic impact when attacking net.

About Power, Spin and Control

POWER

Frames allow players to increase the speed of their shots.

SPIN

Frames allow players to increase the rotation and net clearance of their shots.

CONTROL

Frames allow players to harness the speed and accuracy of their shots.

CLASH

ULTRA

SHIFT

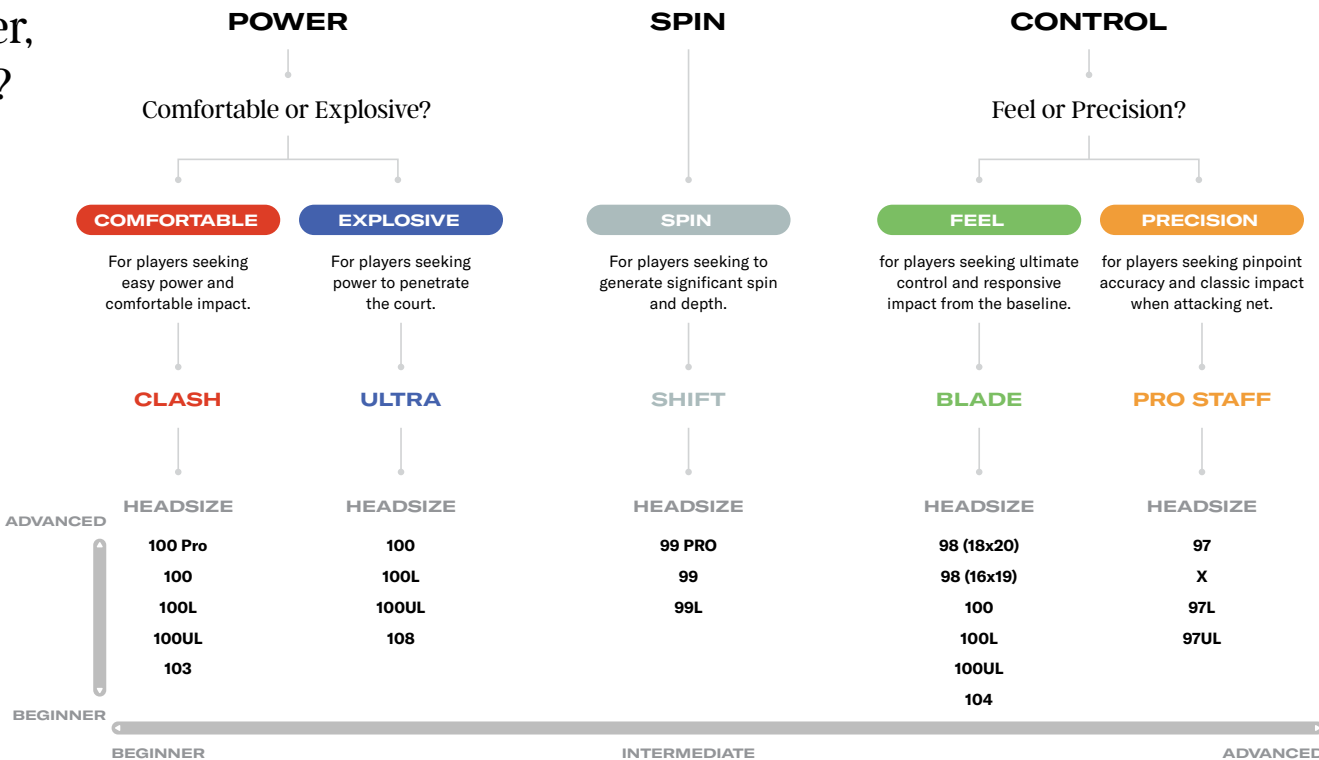

BLADE

Tennis Balls

Taking Center Court.

Cementing itself as a leader on the sport’s biggest stages, Wilson is also taking the lead on the integration of sustainability within the tennis ball industry. Committed to supreme performance on the court and heightened awareness off of it, our tennis ball collection shines from the first point to the last while taking a critical first step to improving environmental impact.

US OPEN*

- **PLAYER LEVEL:** Advanced
- **CORE:** 100% Natural rubber for maximum consistency and resiliency
- **FELT:** Premium woven felt for Extra Duty and Regular Duty
 - Extra Duty:** Ideal for hard courts with longer wool nap and true balance of fluff and durability
 - Regular Duty:** Ideal for indoor play and humid conditions with tighter weave and shorter wool nap, leading to reduced fluffing and faster pace
- **HOW IT PLAYS:** Wilson's fastest and lightest playing ball
- Official Ball of the US Open since 1978

ROLAND-GARROS

- **PLAYER LEVEL:** Advanced
- **CORE:** 100% Natural rubber for maximum consistency and resiliency
 - Uses harder end of core specs for added durability during longer rallies
- **FELT:** Designed for grueling rallies on red clay, felt features Water Resist treatment to limit moisture and dirt pick-up for added consistency and visibility
- **HOW IT PLAYS:** Creates sensation of sturdier ball that plays fast
- Official Ball of Roland-Garros

TOUR PREMIER

- **PLAYER LEVEL:** Intermediate/Advanced
- **CORE:** 100% Natural rubber for maximum consistency and resiliency
- **FELT:** High visibility felt with slightly thicker backing to create impression of more solid feel upon impact
- **HOW IT PLAYS:** Feels solid upon impact, rarely flies
- Created from ball used at the Australian Open until 2018

TRINITI™ PRO

- **PLAYER LEVEL:** Intermediate/Advanced
- **CORE:** Engage Core features advanced plastomer material to thicken core while maintaining weight and rebound characteristics
- **FELT:** High visibility premium woven felt provides excellent consistency through the air and off the bounce
- **HOW IT PLAYS:** Similar to Trinité, but delivers livelier string bed response for faster gameplay
- Fully recyclable, sustainably sourced packaging

TRINITI

- **PLAYER LEVEL:** Any
- **CORE:** Engage Core features advanced plastomer material to thicken core while maintaining weight and rebound characteristics
- **FELT:** STR Felt is more flexible than standard felt, contributing greater core compression and longer dwell times
- **HOW IT PLAYS:** Slightly slower playing ball that stays longer on the string bed
- Fully recyclable, sustainably sourced packaging
- 5% of Trinité profits support worldwide sustainability efforts

CHAMPIONSHIP

- **PLAYER LEVEL:** Recreational
- **CORE:** Blend of rubber types for increased durability
 - Also available in High Altitude core for 3,500 ft surfaces
- Available in Extra Duty and Regular Duty
- **FELT:** Exclusive Duraweave felt features lower wool content with thicker backing for added durability

US OPEN®

For more than 40 years, every point at the US Open has been scored with a Wilson tennis ball.

Unparalleled consistency and performance make it the gold standard in tennis, trusted by the best in the game when it's all on the line. Crafted with premium woven felt for superior bounce characteristics, this ball is ideal for use on hard, abrasive courts.

NXT

Most popular multifilament string with a larger sweet spot for comfortable power.

NXT, made with proprietary xycro microfibers and PU, is renowned for its comfort and power. Its X-bonded core ensures better tension maintenance, allowing players to generate great pace longer. With a 10% larger sweet spot and reduced shock compared to synthetic gut strings, NXT delivers enhanced feel and control. Handle gently during installation to avoid over-clamping and crimping.

REPEL

Multifilament string with GORE® fibers in the core for enhanced moisture protection and performance.

Wilson’s newest multifilament features GORE® ePTFE fibers in the core which adds power while protecting against moisture. The use of 400D fibers, the thickest size allowable, improves durability, comfort, and long-term playability. The result is a string that's protected from the elements, maintains its tension over time, and puts more power behind every shot.

NATURAL GUT

The epitome of tennis strings, natural gut provides unrivaled comfort, power, feel, and tension maintenance on each shot.

Best in class for comfort, feel and power, Wilson's Natural Gut is regarded as the premier tennis string despite modern synthetic advancements. Comprised of natural serosa fibers treated in bath of stabilizing chemicals with outer coating applied for protection, this string is incredibly arm-friendly and powerful. New manufacturing techniques have improved its durability by 15% compared to previous versions of the string.

ALU POWER®

The most-used polyester string on the Pro Tour, ALU Power provides the perfect combination of explosive power and control.

ALU Power is the top string on tour for a reason - the aluminum present in the string enhances playability to go along with impressive power and control. Its unique poly-ether-ether composition exceeds all quality standards for near-zero string variance. Completely impervious to atmospheric conditions such as moisture, ALU Power delivers unrivaled consistent performance for championship-worthy results.

4G

Durable polyester tennis string that maintains tension and delivers top-quality precision and feel.

4G is the string of choice for Stefanos Tsitsipas, Grigor Dimitrov, Mirra Andreeva and is one of the top strings on tour for a reason. 4G features maximum tension maintenance and a cushioned feel on impact, lending itself to excellent playability and adaptability to the modern game defined by power and spin. Boasting the elements of a control string minus the tension loss and discomfort of early polyester strings, 4G sets the standard for players craving precision.

Stringing & Diagnostic Machines

Baiardo® is used to string the rackets of the world's best players on the biggest stages in the sport.

BAIARDO®

USER CUSTOMIZABLE FEATURES:

Designed with a laser focus on best-in-class ergonomics to accommodate the demanding needs of professional stringers, the Wilson Baiardo Stringing Machine pairs a clean, sleek look with a number of features that revolutionize comfort and convenience during the stringing process. Biomechanically Efficient Stringing Technology features three separate motors to create optimal angles for different phases of the stringing process, reducing the need to bend and twist.

BAIARDO® L

USER CUSTOMIZABLE FEATURES:

The Baiardo L builds upon the architecture and design of the award-winning Wilson Baiardo machine with a commitment to lightweight efficiency and practicality. Weighing 20% lighter than the original Baiardo, this machine maintains a sleek look with a few new features: manual up-down tilt for ideal ergonomic design, five-teeth clamps to minimize string interference, mounting posts that adjust inward to better fit badminton racquets, and a reel rack on the floor stand that holds string reels for added convenience.

BAIARDO TUNE PRO

One-of-a-kind value

The all-new baiardo tune pro is a groundbreaking racquet diagnostics machine in many ways. Explore the multitude of benefits for shops and consumers entrenched in the realm of racquet sports.

String Bed Stiffness

- Specific measurement for string bed stiffness adds validity for shop owners recommending re-stringing jobs
- Shops will sell more string and re-stringing jobs

Weight, Balance & Swing Weight

- Simultaneously measures weight and balance in one measurement
- Gives shops ability to tune racquets for additional revenue stream
- Shops can consolidate scale, balance board and swing weight devices into one machine with increased speed and efficiency

Vertical Bending & Horizontal Bending

- First machine to measure vertical bending for tennis rackets
- New way to facilitate racquet sales, especially those with impressive bending metrics such as Clash
- Shops can measure old, worn-out racquets to encourage new racquet purchases.

Calibration

- Easily calibrate weight, balance, swing weight and stiffness to ensure accuracy and repeatability
- Only one machine needs to be calibrated and can be adjusted to shop's standard.

New World of Paddle Sports

- First machine to measure weight, balance, swing weight, face deflection and bending for paddle sports
- Shops that deal solely in these sports will possess competitive advantage with whole new level of expertise and tuning services
- New way to facilitate paddle sales – either by showing poor metrics for old paddles or impressive metrics for new paddles

Tuning Mode

- First machine to offer this feature for all major racquet sports: tennis, badminton, squash, racquetball, padel, pickleball & platform
- No more guess and check required for tuning—speed and efficiency significantly increase without advanced training
- No experienced technician required to customize racquet specs

The More you know

What is string bed stiffness and why do we use it?

String bed stiffness measures the deformation of a string bed through a metric called RA. The higher the RA value, the stiffer the string bed is. The lower the RA value, the looser the string bed is. This produces more deformation of the string bed during contact. Please consult with your clients to determine a string bed stiffness that fits their playing style.

String bed stiffness can reveal tension loss throughout the life of a string bed. RA values will decrease over time and through use. It is recommended to measure your clients' rackets frequently to determine the best time for restringing to maintain optimal performance.

* Wilson Tip: Record RA after stringing to give consumer reference point when later measuring string bed stiffness.

* Wilson Tip: Keep machine in string bed stiffness mode and machine in front of store so consumers and staff can quickly measure racquets against this initial RA.

Tennis:
80 RA (High Stiffness)
40 RA (Low Stiffness)

Badminton:
80 RA (High Stiffness)
40 RA (Low Stiffness)

Squash:
80 RA (High Stiffness)
40 RA (Low Stiffness)

Racquetball:
80 RA (High Stiffness)
40 RA (Low Stiffness)

What is swing weight and why do we use it?

Swing weight is the weight you feel when swinging a racquet. It is a dynamic measurement captured in the rotating swing weight clamp in either kg-cm² or oz-in². The higher the swing weight value, the more "plow through" (momentum) the racquet will exert on the ball during contact, creating more power as a result. A lower swing weight value will reduce "plow through" (momentum) exerted on the ball but will increase the racquet maneuverability. Please consult with your clients to determine a swing weight that fits their playing style

Tennis:
330 kg-cm² (More Plow-Through)
300 kg-cm² (More Maneuverability)

Padel/Platform:
180 kg-cm² (More Plow-Through)
140 kg-cm² (More Maneuverability)

Badminton:
100 kg-cm² (More Plow-Through)
70 kg-cm² (More Maneuverability)

Pickleball:
80 kg-cm² (More Plow-Through)
60 kg-cm² (More Maneuverability)

Squash:
200 kg-cm² (More Plow-Through)
170 kg-cm² (More Maneuverability)

Racquetball:
150 kg-cm² (More Plow-Through)
120 kg-cm² (More Maneuverability)

What is horizontal bending and why do we use it?

Horizontal bending measures the deflection of the racquet at the tip of the frame (12 o'clock) when laid flat via a metric called RA. The higher the RA value, the stiffer the racquet will feel on contact. As RA values decrease the racquet will feel more flexible and forgiving. Please consult with your clients to determine the proper horizontal bending that fits their playing style.

Tennis:
80 RA (High Stiffness)
40 RA (Low Stiffness)

Padel/Platform:
90 RA (High Stiffness)
70 RA (Low Stiffness)

Pickleball:
50 RA (High Stiffness)
20 RA (Low Stiffness)

Squash:
50 RA (High Stiffness)
30 RA (Low Stiffness)

Racquetball:
75 RA (High Stiffness)
50 RA (Low Stiffness)

What is vertical bending and why do we use it?

Vertical bending measures the deflection of the racquet at either side of the frame (3 or 9 o'clock) when laid sideways via a metric called RA. This new test measures racquet stiffness for players who generate lots of spin with a steeper contact angle. A higher RA value will indicate greater stiffness, which is typical for the traditional horizontal swing path. A lower RA value will indicate greater flexibility, which generates more spin for a modern vertical swing path. Please consult with your clients to determine the proper vertical bending that fits their playing style.

Tennis:
80 RA (High Stiffness)
40 RA (Low Stiffness)

What is face deflection and why do we use it?

Face deflection measures the deformation of a paddle face through a metric called RA. The higher the RA value, the stiffer the paddle face is. This produces less deformation of the paddle face during contact. The lower the RA value, the more a paddle face deforms on contact for softer feel. Please consult with your clients to determine a face deflection that fits their playing style.

* Wilson Tip: For pickleball, there is a 0.127 mm (0.005") face deformation limit for legal use in competition.

Padel/Platform:
70 RA (High Deformation)
40 RA (Low Deformation)

Pickleball:
0.1 mm / 0.005" (High Deformation)
0.01 mm / 0.001" (Low Deformation)

HOW OFTEN SHOULD I RE-STRING MY RACQUET?

Your strings can impact your performance just as much as the racket you use. If you think of your racket as your car and the strings as the engine, you would have a re-stringing schedule just like you would have an oil change maintenance schedule for your car. The old rule of thumb has always been to re-string your tennis racket as many times a year as you play in one week (Ex: If you play once a week, you re-string once per year). That model doesn't take into account players who are playing less than once a week, and most importantly, it's not frequent enough. As a starting point, here's a baseline guide with the minimum number of times you should re-string your racquet within a year:

Minimum Number of Times to Re-String Per Year

BEGINNER	FREQUENCY OF PLAY	INTERMEDIATE/ ADVANCED
	Casual (Less than once per month)	
	Occasional (1-3 times per month)	
	Frequent (1-3 times per week)	
	Avid (4 times per week)	
5 4 3 2 1	STRING PER YEAR	1 2 3 4 5

** This graph is for players who are not breaking strings **

What other factors should I consider for re-stringing?

TENSION LOSS

- Strings begin losing tension the moment your racket is taken off the stringing machine.
- As tension drops, you lose control and the ability to generate as much topspin - especially if you play with a poly.
- In general, poly strings lose tension quicker than multifilament strings. They would require more frequent re-stringing.

ARM/ELBOW COMFORT LEVEL

- Strings lose their resilience over time, creating a stiff or dead feeling that can be harsh on your arm.
- A freshly strung racquet will absorb the shock better upon contact, providing more comfort.
- This is especially important if you have elbow or arm issues, in which case you should consider re-stringing more often.

ENVIRONMENTAL CONDITIONS

- Natural gut absorbs moisture quicker in humid environments.
- Poly strings wear out even quicker when exposed to excessive heat or sun.
- On top of re-stringing, a tennis bag with thermoguard lining will better protect the racquet and strings.

STYLE OF PLAY

- Strings will wear out faster if you play more aggressively, use more spin, and/or primarily hit from the baseline.

Visual indicators you're overdue to re-string

NOTCHING

- Strings rub together as you hit the ball, creating friction.
- This leads to grooves at the intersection of the strings in the middle of the racquet.

FRAYING

- Natural gut and multifilament strings are comprised of tiny fibers that eventually break down.
- Poly strings are a single filament, so they will not fray.

I am breaking strings too often. What should I do?

GAUGE OPTIONS

- The thicker the gauge, the more durable it will be.

SWITCH TO HYBRID STRING

- If you're playing with a multifilament string, consider switching to a poly string in the mains or crosses for more durability.

SWITCH TO POLYESTER (MONOFILAMENT) STRING

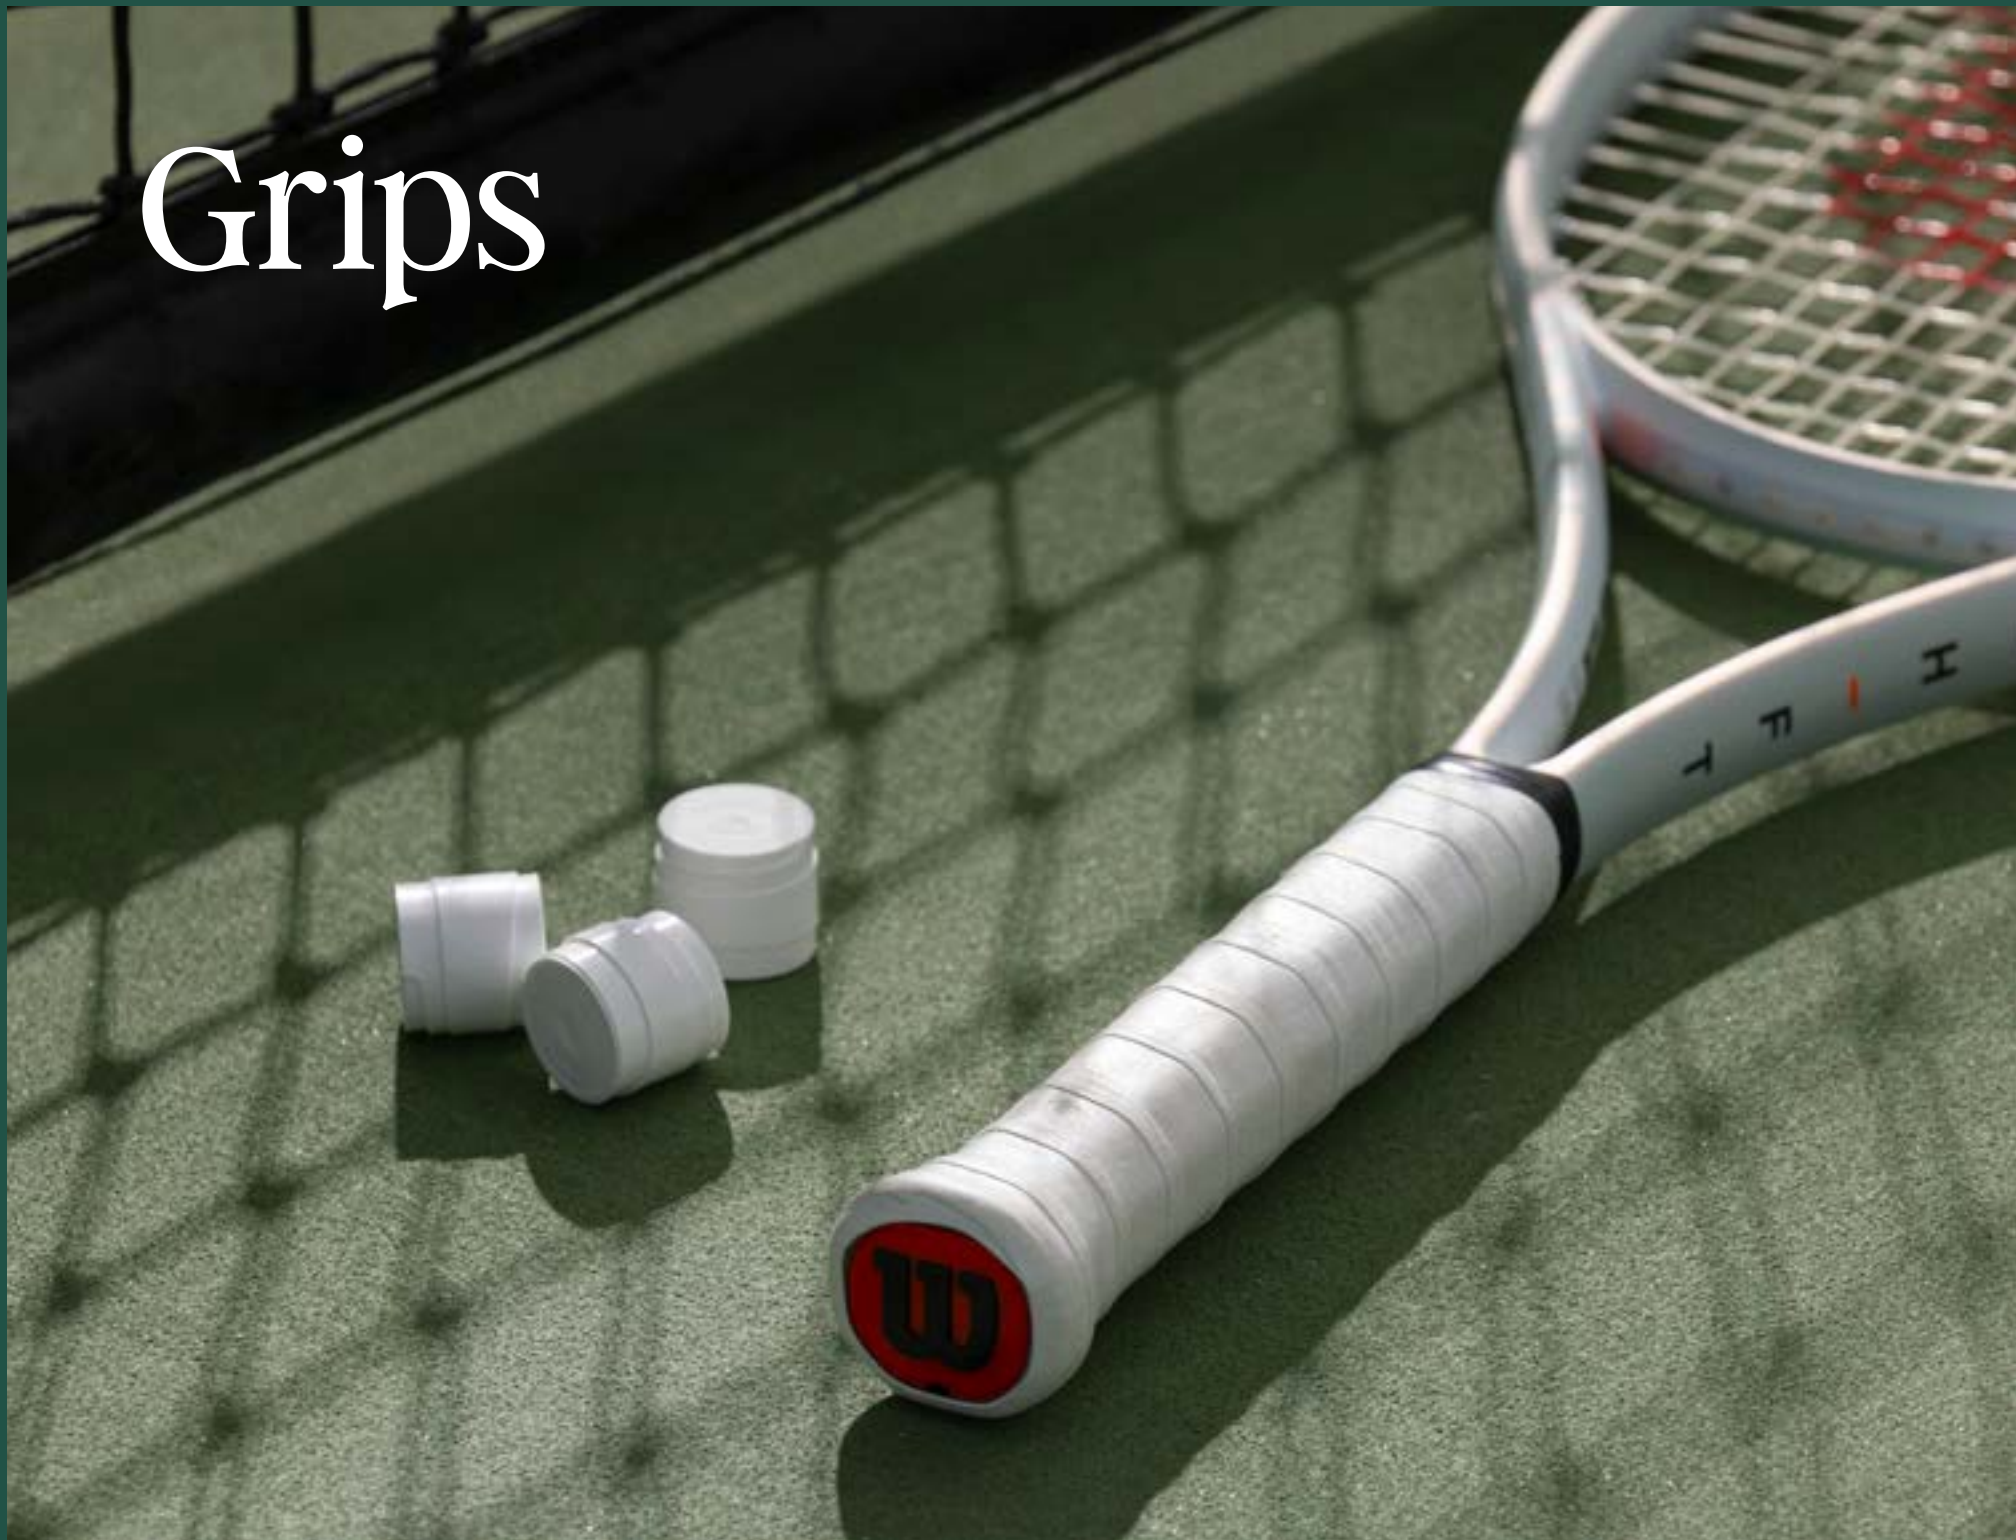

- Poly strings provide excellent durability since they are made of a single filament.
- However, they also lose tension quicker. This can require more frequent re-stringing for consistent performance.
- If you have arm/elbow issues, this may not be the best option due to its stiffer feeling.

Additional re-stringing tips

- As the performance of the string changes, you continually adjust your technique - whether you notice it or not. It can become frustrating to constantly overcompensate when the strings are no longer performing as they should. If you're an avid player or competing in tournaments and looking for more consistent performance, you will want to consider re-stringing on a more regular basis.

- If you carry multiple racquets, you ideally should re-string both every time. Even though you are primarily only playing with one racket, the strings in the other racquet are still losing their tension and resilience (just at a slightly slower pace). If you break the strings in your primary racket in the middle of the match and switch to your other racket, it will play very differently if it hasn't been re-strung in a while.

Grips

PRO OVERGRIP

Our most-used grip on the Pro Tour, Wilson Pro Overgrip stands for superb feel, comfort and durability.

Pro Overgrip delivers a variety of benefits that sets it apart from the competition. Its super thin, tacky, high-stretch felt provides superb feel, comfort and durability for an extended period of time. The standard for overgrips in today's game, Pro Overgrip is preferred by players of all ages and abilities.

Comfort

PRO OVERGRIP

Our best-selling overgrip used by the world's best, including Aryna Sabalenka and Stefanos Tsitsipas

360° OF EXCELLENCE

Unlocking The Inner Athlete

Power, precision, control, and feel. When it comes to padel rackets and equipment, Wilson is at the forefront of innovation that transforms the game with unmatched excellence. Our meticulously crafted range of gear is designed to elevate every aspect of play-engineered for those who aspire to reach new heights in the sport and unlock new possibilities on the padel court.

INNOVATIONS

AEROEXACT DESIGN

AEROEXACT DESIGN
Optimized padel geometry made to increase swing speed while making off-center shots better-feeling, more powerful and precise

3K CARBON FACE
Face engineered to provide exceptional blend of incredible power and precise control while maintaining the comfort.

CARBON FIBERGLASS COMPOSITE:
Blend of carbon and woven fiberglass contributes lightweight feel and produces greater power than fiberglass padel rackets.

SHARP HOLE TECHNOLOGY
Advanced hole-drilling process generates increased bite with every stroke.

I-BEAM
This technology increases the overall power potential of the racket by adding stiffness and rigidity to the middle part of the frame to help you dominate the game.

COMFORTFLEX FACE
Specifically designed face construction provides effortless power, elevating your game with unparalleled comfort and reducing arm fatigue.

PRIMERO CARBON FACE
Integrates premium carbon into the frame for mix of incredible power and quick responsiveness, maximizing propulsion off the padel racket face.

SHOCK SHIELD GRIP
Unique blend of PU and Iso-Zorb supplies excellent combination of tack and cushioned comfort.

SPIN² TEXTURE
Generates maximum spin on attacking shots by optimizing the texture on the racket's surface. Higher density texture at the top helps produce powerful shots with incredible spin

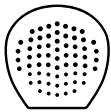

C2 TUBULAR CONSTRUCTION
Crafted with precision using a carbon tubular construction, ensuring a uniform tubular thickness and resulting in increased durability, incredible shot control, and superior feel over the entire padel racket.

FIRM EVA FOAM
Produces solid, crisp shots for quicker ball deflection and excellent control.

POWER FOAM
High-density foam engineered to create incredibly powerful shots while having a solid, crisp feel and excellent control.

DUO GRID HOLE PATTERN
Hole pattern that optimizes power and control in different parts of the racket. The larger diameter top holes provide more power on overheads, while the smaller holes on the bottom provide enhanced spin and control for defensive shots and volleys.

SOFT EVA FOAM
Offers cushioned feel with impressive shock absorption, generating effective blend of comfort and lightweight power.

15K CARBON FACE
Face engineered to deliver an unbeatable mix of explosive power and responsiveness, maximizing propulsion off the face while maintaining unparalleled precision.

CARBON FIBER FACE
A strategically woven layer of carbon fiber gives players the ability to hit with impressive power.

SPIN EFFECT TEXTURE
Textured surface that grips the ball upon contact for enhanced spin and excellent feel on every shot.

HOW TO CHOOSE A PADEL RACKET

DEFY V1

Explosive Power, Aerodynamic & Aggressive Spin

A diamond shape racket designed for attacker players, seeking to achieve their full potential and enhance their quick and fast game

AEROEXACT DESIGN

Optimized padel geometry made for aerodynamic movements that increases swing speed while making off-center shots a better feel, more powerful and more precise.

I-BEAM

This technology increases the overall power potential of the racket by adding stiffness and rigidity to the middle part of the frame to help you dominate the game.

SPIN² TEXTURE

Generates maximum spin on attacking shots by optimizing the texture on the racket's surface. Higher density texture at the top helps produce powerful shots with incredible spin.

BLADE V3

Power with Stability & Reactive Feel

Crafted for attacker players with a specialized frame construction that delivers a perfect blend of power with stability.

C2 TUBULAR CONSTRUCTION

Crafted with precision using a carbon tubular construction, ensuring a uniform tubular thickness and resulting in increased durability, incredible shot control, and superior feel over the entire padel racket.

ANTI-FRAGILE EDGE

Reinforces the padel racket head with robust material to provide long-lasting durability during aggressive play.

DUO GRID HOLE PATTERN

Hole pattern that optimizes power and control in different parts of the racket. The larger holes on the top provide more power on overheads, while the smaller holes on the bottom provide enhanced spin and control for defensive shots and volleys.

BELA V2.5

Wider Sweetspot, Consistent Feel & Spin Advantage

The racket collection co-designed with Fernando Belasteguin to celebrate a memorable legacy for versatile players.

C2 TUBULAR CONSTRUCTION

Crafted with precision using a carbon tubular construction, ensuring a uniform tubular thickness and resulting in increased durability, incredible shot control, and superior feel over the entire padel racket.

SIGNATURE SPIN EFFECT TEXTURE

Textured surface that grips the ball upon contact for enhanced spin and excellent feel on every shot.

FINGER NOTCHES

Finger notches in the throat provide a comfortable second hand feel, while an added clear bumper protects the frame and enhances durability.
